MAIL DATE	DELIVERY MODE
09/01/2009	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE <u>3</u> MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.
- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on <u>01 June 2009</u>.

2a)☒ This action is **FINAL**.   2b)☐ This action is non-final.

3)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4)☒ Claim(s) <u>41-43</u> is/are pending in the application.

    4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5)☐ Claim(s) _____ is/are allowed.

6)☒ Claim(s) <u>41-43</u> is/are rejected.

7)☐ Claim(s) _____ is/are objected to.

8)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9)☐ The specification is objected to by the Examiner.

10)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

    Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

    Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

    a)☐ All   b)☐ Some * c)☐ None of:

        1.☐ Certified copies of the priority documents have been received.

        2.☐ Certified copies of the priority documents have been received in Application No. _____.

        3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

    * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1)☒ Notice of References Cited (PTO-892)

2)☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)

3)☐ Information Disclosure Statement(s) (PTO/SB/08)
    Paper No(s)/Mail Date _____.

4)☐ Interview Summary (PTO-413)
    Paper No(s)/Mail Date. _____.

5)☐ Notice of Informal Patent Application

6)☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1.   The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set
> forth in section 102 of this title, if the differences between the subject matter sought to be patented and
> the prior art are such that the subject matter as a whole would have been obvious at the time the
> invention was made to a person having ordinary skill in the art to which said subject matter pertains.
> Patentability shall not be negatived by the manner in which the invention was made.

2.   Claims 41-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Heo et al (5,987,417) in view of Endoh et al. (5,896,358).

Consider claim 41, Heo et al teach a signal encoding apparatus comprising:

means for generating information (Col 2, lines 10-12 "The audio data is recorded in the

linear pulse code modulation [PCM], Dolby AC-3, or MPEG format"); and means for

formatting the information into a data structure; wherein the data structure has an area

containing an audio title set (Col 13, lines 47-50 "the title set information management

table recorded in one of the information areas of the DVD audio disk"), the audio title set

including data representing a multi-channel digital audio signal resulting from steps

including [1] quantizing a first original audio signal at a first sampling frequency (Col 12,

lines 24-31 "a first, second or third number of quantization bits, a corresponding first,

second or third sampling frequency, and information relative to the number of audio

channels are all recorded on the audio title information management table"), [2]

quantizing a second original audio signal into a quantization-resultant audio signal at a

second sampling frequency (Col 12, lines 24-31 "a first, second or third number of

quantization bits, a corresponding first, second or third sampling frequency, and

information relative to the number of audio channels are all recorded on the audio title

information management table"), and [3] subjecting the quantization-resultant audio

signal to a bit shift (Col 3, lines 45-51 "If the audio coding mode is 010b or 011b, the

quantization information is defined as follows...01b: the dynamic range control data is

present in the MPEG audio stream"), the first original audio signal being in a first

channel group having multiple channels (Col 12, lines 24-31 "a first, second or third

number of quantization bits, a corresponding first, second or third sampling frequency,

and information relative to the number of audio channels are all recorded on the audio

title information management table"), the second original audio signal being in a second

channel group having multiple channels (Col 12, lines 24-31 "a first, second or third

number of quantization bits, a corresponding first, second or third sampling frequency,

and information relative to the number of audio channels are all recorded on the audio

title information management table"), the first sampling frequency being assigned to

each of the channels in the first channel group (Col 7, line 66 – Col 9, 32 "the stream id

of the linear PCM audio packet becomes 1011 1101b [private_ stream_ 1], its sub_

stream_ id being 1010 0***b. Second, the stream id of the AC-3 audio packet becomes

1011 1101b [private_ stream_ 1], its sub_ stream_ id being 1000 0***b. Third, the

stream id of the MPEG audio packet becomes 1100 0***b or 1101 0***b, having no

sub_ stream_ id. In the stream id or sub_ stream_ id, "***" indicates the decoding audio

stream number having a value between 0 and 7"), the second sampling frequency being

assigned to each of the channels in the second channel group (Col 7, line 66 – Col 9,

32 "the stream id of the linear PCM audio packet becomes 1011 1101b [private_

stream_ 1], its sub_ stream_ id being 1010 0***b. Second, the stream id of the AC-3

audio packet becomes 1011 1101b [private_ stream_ 1], its sub_ stream_ id being 1000

0***b. Third, the stream id of the MPEG audio packet becomes 1100 0***b or 1101

0***b, having no sub_ stream_ id. In the stream id or sub_ stream_ id, "***" indicates the

decoding audio stream number having a value between 0 and 7"); the bit shift having a

quantity common to the channels in the second channel group (Col 3, lines 45-51 "If the

audio coding mode is 010b or 011b, the quantization information is defined as

follows…01b: the dynamic range control data is present in the MPEG audio stream");

the audio title set including data representing the first sampling frequency and the

second sampling frequency (Col 12, lines 24-31 "a first, second or third number of

quantization bits, a corresponding first, second or third sampling frequency, and

information relative to the number of audio channels are all recorded on the audio title

information management table"), data representing the quantity of the bit shift and

channel assignment information for identifying the channels in the first channel group

and the channels in the second channel group (Col 10, lines 50-54 "The DTS audio

packet has one byte of packet header, one byte of sub_stream_id, 3 bytes of audio

frame information, and one byte to 2016 bytes of DTS audio data. The stream id of the

DTS audio packet is 1011 1101b [private_1], its sub_stream_id being 1000 1***b. Here,

*** of the sub_stream_id indicates the decoding audio stream number having a value of

0 to 7" and Col 3, lines 45-51 "If the audio coding mode is 010b or 011b, the

quantization information is defined as follows…01b: the dynamic range control data is

present in the MPEG audio stream").

However, Heo does not explicitly teach including a down-mix mode information for assigning whether or not inhibiting down-mix stereo output from the multi-channel digital audio signal.

Endoh teaches including a down-mix mode information for assigning whether or not inhibiting down-mix stereo output from the multi-channel digital audio signal (col. 9, lines 19-27 and col. 10, lines 16-32). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate a down-mix mode information to the device taught by Heo to allow the device to selectively down mix the audio signal.

Consider claims 42 and 43, Heo and Endoh teach an apparatus for decoding the digital audio signal encoded by a signal encoding apparatus, the multi-channel audio signal being in the first channel group and the second channel group, the apparatus comprising: means for generating the data representing the first sampling frequency and the second sampling frequency (Col 12, lines 24-31 "a first, second or third number of quantization bits, a corresponding first, second or third sampling frequency, and information relative to the number of audio channels are all recorded on the audio title information management table"), the data representing the quantity of the bit shift (Col 3, lines 45-51 "If the audio coding mode is 010b or 011b, the quantization information is defined as follows…01b: the dynamic range control data is present in the MPEG audio stream"), and the channel assignment information for identifying the channels in the first channel group and the channels in the second channel group (Col

10, lines 38-40 "Explaining the channel assignment of the linear PCM, ACHO and ACHI channels correspond to L channel and R channel in the stereo mode, respectively. The multi-channel mode is coded to be compatible with the stereo mode" and Col 10, lines 50-54 "The DTS audio packet has one byte of packet header, one byte of sub_stream_id, 3 bytes of audio frame information, and one byte to 2016 bytes of DTS audio data. The stream id of the DTS audio packet is 1011 1101b [private_1], its sub_stream_id being 1000 1***b. Here, *** of the sub_stream_id indicates the decoding audio stream number having a value of 0 to 7"); and means for decoding the digital audio signal in the first channel group and the second channel group in response to the first sampling frequency, the second sampling frequency, the quantity of the bit shift, the channel assignment information (Col 12, lines 24-31 "a first, second or third number of quantization bits, a corresponding first, second or third sampling frequency, and information relative to the number of audio channels are all recorded on the audio title information management table" and Col 3, lines 45-51 "If the audio coding mode is 010b or 011b, the quantization information is defined as follows…01b: the dynamic range control data is present in the MPEG audio stream"), and the down-mix mode information for assigning whether or not inhibiting down-mix stereo output from the multi-channel digital audio signal (col. 9, lines 19-27 and col. 10, lines 16-32 of Endoh); and down-mixing permitting means for permitting down-mixed stereo output from the multi-channel digital audio signal when said decoded down-mix mode information is not inhabiting down-mixed stereo output from the multi-channel digital audio signal (col. 9, lines 19-27 and col. 10, lines 16-32 of Endoh).

Conclusion

3.   Applicant's amendment necessitated the new ground(s) of rejection presented in

this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37

CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to TAT CHIO whose telephone number is (571)272-9563.

The examiner can normally be reached on Monday - Thursday 9:00 AM-5:00 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Thai Q. Tran can be reached on 571-272-7382. The fax phone number for

the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
